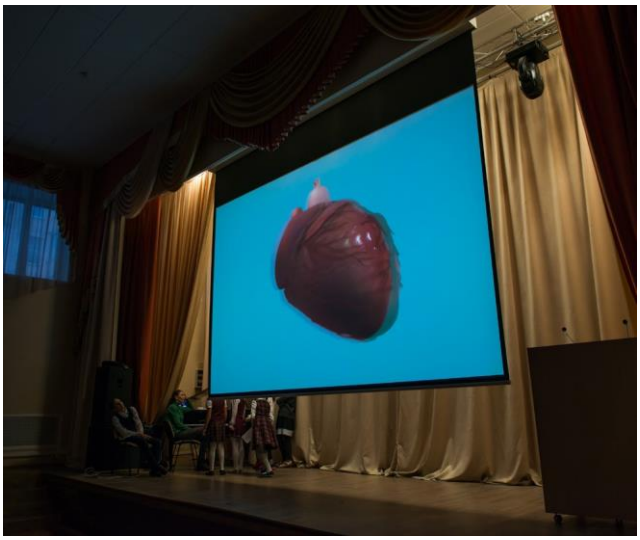
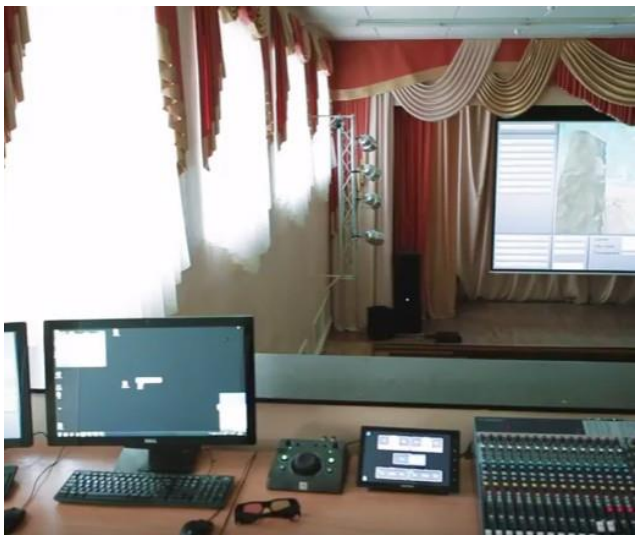
POLYVALENT ASSEMBLY HALL

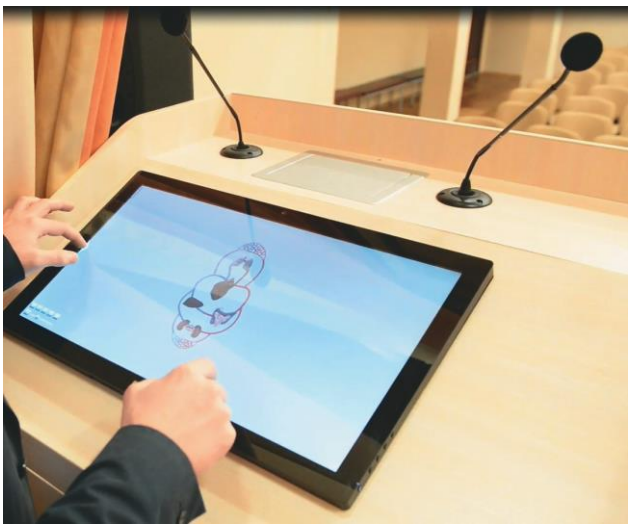
The stationary solution implemented in the auditorium allows you to turn it into a multifunctional room for training, teleconferences, conferences, presentations, celebrations and concerts with automated control of any sources of audio-visual information.

TECHNICAL CAPACITY

- *Conducting training sessions using 3D-stereo content*







- *Conducting conferences using an interactive podium*

- *Conducting concert and mass events*

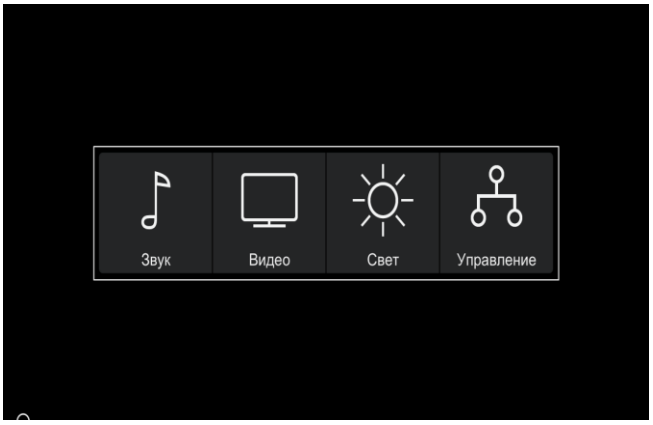
EQUIPMENT

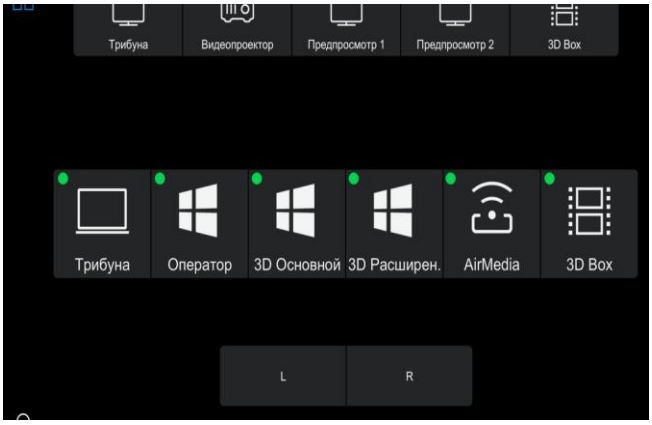
- Integrated multimedia multifunctional system with 3D visualization SVEGA® MMK-3D

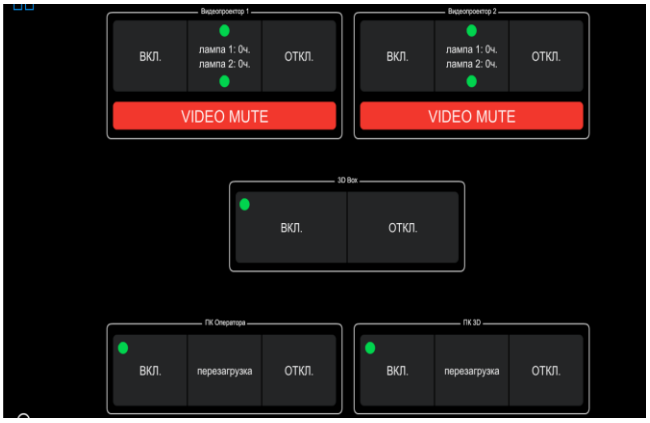
- The main elements of the auditorium are the availability of a large screen and interactive tools for presentations.

- The main means of information display are high-quality projection screens.

- For the convenience of centralized management, company specialists have developed software to manage the entire complex from a tablet.







- In the multimedia system it is possible to switch audio and video from any source of the system to any means of displaying the system, whether it is an interactive podium (USB-Flash drive or connected tablet/laptop), operator's PC, document camera or even a laptop or any other mobile device in the room, connected to the system via wifi.

- The sound system is implemented on the basis of professional acoustic systems.
